PROFESSIONAL SUMMARY

Product Specialist passionate about games and game development, with 3+ years of hands-on experience designing game mechanics and features for mobile, casual and multiplayer games. Improves game experience based on metrics and user feedback, using strong analytical skills, structured playtests, mobile market research, and Python-based probabilistic simulations to make data-driven design decisions. Thinks creatively to design unique, fun and engaging player features, translates them into clear product requirements, and works closely with engineers as part of cross-functional teams. Excellent communication skills and a genuine appreciation for teamwork.

PROFESSIONAL EXPERIENCE

Game Designer, Bright Void Interactive (Contract) Dec 2025 - Feb 2026

- Delivered feature and level-flow iterations for a commercial multiplayer game, improving game experience based on hands-on testing and player-facing usability issues, during a 3-month contract.
- Worked closely with engineers to refine interactions and layouts within production constraints.

XR Virtual Production Specialist, EMN XR Jun 2024 - Sep 2024

- Delivered 3 real-time interactive projects under live deadlines, balancing user experience, performance requirements and stakeholder feedback across cross-functional production teams.

Game Designer, Tigloos Dec 2022 - May 2024

- Expanded [Fixer: Car Mechanic's Journey](#) (mobile tycoon game) from a single car-purchase interaction into a 3-part purchase, repair and progression loop by designing and shipping post-launch game mechanics and feature requirements.
- Improved game experience by reducing onboarding from 6 tutorial steps to 3, based on metrics and qualitative feedback from a structured 25-participant playtest.
- Stayed current with the mobile market by playing and analyzing competitor mobile tycoon games, comparing core loops, progression systems, themes and gameplay patterns to identify new product opportunities.
- Built a custom [Python](#) simulation evaluating 105 in-game days of customer frequency, buyer/seller behavior, item condition, rarity, pricing and negotiation outcomes, applying probabilistic models and statistical reasoning to support data-driven economy and balance decisions.

Developer Intern, 2Medya Oct 2022 - Dec 2022

- Supported feature delivery from implementation through QA by developing gameplay logic, debugging issues and tracking production tasks.

PROJECTS

Fill The Mold - Independent Hybrid-Casual Mobile Game 2026

- Developed a prototype into a 5-stage mobile gameplay loop through a 4-phase product roadmap, translating player-experience goals into prioritized mechanics, progression systems and feature requirements.
- Designed 3-5 minute sessions with 5-8 customer orders and an economy across 3 resources and 5 factory areas, connecting player actions to rewards, upgrades and content progression.
- Validated scoring and difficulty logic through 41 passing gameplay checks, converting identified friction into acceptance criteria and prioritized iteration tasks.

[Tech Hustle](#) - Multiplayer Simulation Game 2025

- Designed features and level flow, tested usability and collaborated with engineers through implementation.

[Fixer: Car Mechanic's Journey](#) - Mobile Tycoon Game (Tigloos) 2024

- Designed the repair and progression expansion, analyzed onboarding with 25 players and modeled 105 in-game economy days.

SKILLS

Product Roadmaps, Game Mechanics and Feature Design, Progression Systems, Economy and Balance Design, Onboarding and FTUE, Level Flow

Player Feedback Analysis, Playtesting, Player Data Analysis, Probabilistic Modeling and Simulation ([Python](#)), Mobile Market and Competitor Research

Cross-Functional Collaboration with Engineers, Communication and Teamwork, Machinations

LANGUAGES

Turkish (Native), English (B2+)

EDUCATION

Bachelor's Degree (B.A.), Radio, Television and Cinema, Istinye University Jun 2023 - Jun 2026

GPA: 3.33
